Building Better Management

https://miro.com/app/board/uXjVL6JQ5D8=/

PROJECT OVERVIEW

Many buildings today are managed by professional property management companies that provide continuous maintenance- including repairs, cleaning, and additional services- to ensure the property remains in optimal and orderly condition.

High-occupancy buildings require more complex management, necessitating seamless coordination and information sharing between residents and management.

PROBLEM STATEMENT

Managing a shared residential building is a complex challenge involving various pain points. Without effective solutions, building management becomes a source of frustration and dissatisfaction for residents.

KEY PAIN POINTS

Coordination challenges

Scheduling repairs, cleaning, and other services is often unclear, leading to delays and disorder.

Low satisfaction

Residents are often dissatisfied due to lack of responsiveness, lack of financial transparency, and inadequate services.

Maintenance visibility issues

Residents want to stay informed about building works and repairs, including status and costs.

Payment awareness gaps

Residents aren't always aware of when or how much to pay, leading to arrears and financial issues for the building.

Delayed resolution

Building issues are often resolved slowly, especially without a structured system for request management.

Lack of request tracking

Residents struggle to know if their issues are being addressed and rarely receive status updates.

Preference for digital communication

Residents prefer reporting issues via an app rather than phone calls to save time and prevent coordination errors.

THE GOAL

To create a platform designed to provide a convenient and efficient management experience, offering quick access to services and real-time updates.

USER VALUE PROPOSITION

Through the app, residents gain peace of mind and certainty, maintained by full transparency throughout the entire building management process.

PRODUCT DEFINITION

The app is a digital management platform providing residents with tools for shared building living, including: payment access, announcements, maintenance schedules, issue reporting, and professional recommendations.
